How to collaborate at work

Ideas for Action

Think about the context for collaboration

Consider your key collaborators and the best context for working together (e.g. *choice of technology, meeting frequency*). Design your ways of working with these insights in mind, to create an environment that allows your best work to happen.

Choose your collaborators

Avoid defaulting to the same collaborators every time. Ask yourself:

Who has done this before?

Who would do this differently?

Who has never done this?
